

SGF

PowerGen 2014

18 m², 3 x 6 m

BIG, EVEN IN SMALL SPACES

For six decades now, SGF has embodied know-how combined with impressive inventiveness. This is the strategy the company uses to design precisely fitting torque transmission and vibration damping components for any requirements – worldwide – while always keeping cost-effectiveness, comfort and safety in mind. Among other things, the company produces couplings for wind turbines and exhibits at the PowerGen, the trade show for renewable energy in Europe.

PowerGen 2014

18 m², 3 x 6 m

This stand leaves no doubt that a global company can be showcased appropriately even in a small space. The quality of the understated and well-thought-out stand design emphasizes the values of the company. The materials and design of the individual stand components are a perfect match. The visitor's attention is drawn to the products. Sometimes, less is more.

PowerGen 2014

18 m², 3 x 6 m

Temporary architecture for long-lasting brand success. Stand construction from Aachen for all of Europe.

Design – Planning – Realization

Our own success is closely linked to that of our customers. This is why we always focus on those factors that make our customers successful. The first and most important step in each project is to listen and to understand the goals. Good design as well as a high-quality and technically sound solution are a must.

What makes us different is that we see it as our duty to provide security for our customers. The security each customer needs, to know that his pressing tasks that are critical for success are in good hands.
